PROFILE SUMMARY

Pre-final year Computer Science (Data Science) student with experience building AI systems, graph intelligence platforms, and large-scale data pipelines through internships at **I4C (Ministry of Home Affairs)** and **SentinelOne**. Interested in ML systems, LLM applications, and backend engineering. **CGPA 9.2/10**.

EDUCATION

Maharaja Agrasen Institute of Technology, GGSIPU

Sept 2023 – July 2027 (Expected)

Bachelor of Technology in Computer Science (**Specialization: Data Science**)

CGPA: 9.2/ 10 (Till Semester 5)

EXPERIENCE

Indian Cyber Crime Coordination Centre (I4C, Ministry of Home Affairs)

Feb 2026 – Apr 2026

- Processed and standardized 10K+ fragmented NCTC records through entity resolution, metadata normalization, and taxonomy alignment to support a national resource pool of cybersecurity experts and trainers.
- Developed Python-based investigative pipelines to extract DNS, ASN, ISP, geolocation, and hosting metadata from suspicious domains reported through national cybercrime reporting channels.
- Performed digital forensic investigations using FTK Imager and Autopsy, including forensic disk acquisition, artifact analysis, and vehicle forensics in controlled VM-based environments.

SentinelOne – Solutions Engineer Intern

Aug 2025 – Jan 2026

- Automated IOC enrichment workflows using VirusTotal APIs to integrate contextual threat intelligence into SOC investigation pipelines, reducing manual triage effort by ~40%.
- Contributed to AI-driven SIEM workflows involving log analysis, alert correlation, anomaly detection, and incident investigation processes.

Infosys Springboard – AI Intern

Aug 2025 – Oct 2025

- Built and deployed ScoreSight, a sports analytics platform with 5 ML pipelines achieving ~85% accuracy.
- Executed data processing, feature engineering, hyperparameter tuning and model optimization using Python.

ACHIEVEMENTS AND COMPETITIVE PROGRAMMING

- **LeetCode**: Knight (rating 2000+), **Codeforces**: Specialist (rating 1400+)
- **ICPC AlgoQueen 2025**: Finalist (Top 400 / 5000+ participants)
- **India Innovates Hackathon 2026**: Finalist (Top 10 in Digital Democracy domain; shortlisted for ministry evaluation)
- **Tata Imagination Challenge 2025**: Semi-Finalist (Top 7,000 / 300,000+ participants nationwide).
- **UIDAI Data Hackathon 2025**: Developed a district-level risk-prioritization framework across ~916 districts for UIDAI Hackathon 2025 using peer-normalized intensity ratios and percentile-based risk flagging.

PROJECTS

Content Integrity Investigator – RL Environment for AI Agent Training

[GitHub](#)

Tech Stack: Python, FastAPI, Pydantic, Docker, OpenAI API

- Developed a multi-step Reinforcement Learning (RL) environment to transition AI agents from static one-shot classification to multi-turn reasoning for social media moderation.
- Architected a state-machine framework using Pydantic for schema enforcement and a tool-use action space, integrating an asymmetric reward function to minimize high-stakes false positives.
- Mitigated strategy degeneracy (e.g., "blind tool use") by engineering adversarial episode pools, achieving an average baseline score of 0.52, significantly exceeding the 0.45 success threshold.

BlueOrbit – Geopolitical Intelligence Engine

[GitHub](#) | [Live Demo](#)

Tech Stack: Python, FastAPI, Neo4J, Pandas, NetworkX

- Developed a graph-based intelligence platform using Neo4j (140K+ relationships) to model geopolitical, organizational, and cross-domain entity networks.
- Developed agentic data pipelines and analytics APIs using FastAPI; deployed backend on Render.
- Designed a simulation engine (40+ scenarios) that analyzes multi-hop relationships and adjusts connection weights to model cascading impacts across countries.

StreamSentry — Real-Time Anomaly Detection and Analytics Pipeline

[GitHub](#)

Tech Stack: Kafka, Airflow, Snowflake, dbt, River, Streamlit

- Streaming pipeline ingesting PaySim transactions via Kafka with synthetic anomaly injection (~3% adversarial events).
- Consumer persists batches as NDJSON; uploads to Snowflake; dbt models feature marts with Dynamic Tables.
- Two-layer ML scoring: rule-based classifier + River online learning model orchestrated end-to-end with Airflow.

SKILLS

- **AI and Agentic Systems:** PyTorch, scikit-learn, Pandas, NumPy, Hugging Face Transformers
- **Data and Intelligence Systems:** Neo4j, PostgreSQL, MongoDB, Kafka, Airflow, FastAPI, Snowflake
- **Programming Languages:** Python, Java, C++, JavaScript
- **Tools & Platforms:** Linux, Docker, Git, Tableau
